

# Consequences of CEC – Lav faucets

---

- Do water savings result from reduced flow?
  - Two residential end-use studies:

	1999	2016
No. of houses logged (U.S./Canada)	1,187	762
Avg. daily faucet use (gallons per household)	26.7	26.3
Avg. faucet flow rate (gallons per minute)	1.4 gpm	1.0 gpm

- No savings with reduced flow rate
